

Women in Aerospace Webinar

DISCOVERER is a Horizon 2020 funded project led by the University of Manchester, it aims to revolutionise Earth observation satellites by developing technologies to enable operations in very low earth orbits, with the benefit of making the satellites smaller, lighter & more economical. One aspect of the project is SOAR, our Satellite for Orbital Aerodynamics Research, a 3U cubesat launched on 3rd June 2021 on Space X CRS-22 mission.

Date: 6th October 2021

Time: 1.30pm (UK)

Register via:

Our event aims to encourage and engage as many young female students as possible in Science, Technology, Engineering and Maths (STEM) subjects to help them consider a career in this field. Young people will be able to learn from the comfort of their own classroom and interact with a range of female scientists and engineers who work or support the international space industry.
